# JSSOR LAYERED SLIDER

## For Magento 1

## Overview

An exclusive layered slider built on Jssor JS that livens up your dull image banners, making them impressive and impactful. Give your image banners a radiant look with more than 40 effects, 5 caption and 2 caption image positions. And, yes it's fully responsive.

**All it takes is 3 easy steps to have this on your website:**

1. Download and install the extension

2. Upload image banners, select effects you want

3. Add the Code Snippet where you want the banner to be invoked

Read **How to use?** section to find out more about the slider configurations

**Demo Link:** http://extensiondemo.vsourz.co/

**Need Support?** Click Here

## Features

1. Simple, easy to use interface

2. Creates Responsive slideshows within seconds

3. Unrestricted support for Image slides (supports Caption, Link, Description Text, Images, Videos, Maps)

4. Full Width Slider Support

5. Fast – only the minimum JavaScript and CSS is included in your page, making it faster to load

6. Touch Swipe by Finger/Mouse

7. Auto-detect Vertical/Horizontal Drag

8. Cross Browser, All Browsers Supported

9. Mobile Device Optimized

10. Editable CSS from Magento Back-end.

11. Place your custom HTML code inside your image slide

12. Publish/Unpublish Slides based on selected date

## How to Install

1. Download an extension from your personal account.

2. Backup your website database and web directory.

3. Unzip the extension folder locally.

4. Copy all folders and paste them into your Magento root folder. This will not overwrite any existing files, just add new files into the folder structure.

5. Login into your Magento Backend / Admin panel.

6. Go to System >> Cache Management. Select all cache type and click on Flush Magento Cache and same process for Flush Cache Storage.

7. Navigate to System/Configuration, if you can see the extension tab, it is installed properly.

8. Once you clicking on the extension tab if you got an error of access denied then you need to logout admin panel and login again.

9. Go to frontend and try to process, make sure that everything is OK.

## How To Use?
